

Compressed Gases Classroom Preparation

BLR's Safety Training Presentations

OSHA's Compressed Gas Requirements

OSHA has requirements for compressed gases in various sections. General requirements can be found in 29 CFR 1910.169. Requirements for specific gases such as hydrogen or oxygen systems can be found in 29 CFR 1910.101-105. Requirements for LPG (i.e., propane) can be found in 29 CFR 1910.110.

Preparing Handouts and Training Props:

- ☐ Print out and make copies of the Compressed Gases Quiz.
- ☐ If possible bring a cylinder into the classroom on the appropriate hand truck. You can use this to discuss labeling, proper transportation (i.e., hand truck), correct ways to secure the cylinder, and the importance of keeping the cap on.
- ☐ Bring in a regulator and gauge.
- ☐ Bring labels or signs from the storage areas.
